EDUCATION

Southern Methodist University

Dallas, TX

Lyle School of Engineering

May 2027

Bachelor of Science, Computer Science and Data Science

GPA: 3.70 / 4.0

- Scholarships: Turner's Scholar, SMU Discovery Fellowship, Founders Scholarship
- Relevant Courses: Data Structures; Algorithms; Operating Systems; Machine Learning; Artificial Intelligence

WORK EXPERIENCE

OASIS

Dallas, TX

AI Solutions Engineer

June 2026 – August 2026

- Engineered a multi-agent governance system scheduled via cron jobs to execute fully autonomous Go-To-Market workflows, seamlessly managing end-to-end outbound sales and inbound communications.
- Automated real-time lead discovery and targeted account matching by dynamically traversing company context graphs and integrating B2B intelligence APIs.

Southern Methodist University

Dallas, TX

Undergraduate Research Fellow

June 2026 – August 2026

- Exploring advanced Joint-Embedding Predictive Architectures (V-JEPA2) to evaluate novel methodologies for continuous latent representation learning and complex feature extraction.
- Designing experimental research pipelines to assess non-generative vision models, optimizing compute workflows and accelerating iterative training phases via CUDA/MPS hardware dispatch.

World Tycoon

Dallas, TX

Founder & Lead Engineer

June 2024 – June 2025

- Developed a Web3 city-building simulator funded by a competitive \$10,000 grant, leveraging Cartesi Layer 2 and a GraphQL interface for event-driven gameplay processing.
- Engineered a high-throughput decentralized backend to process over 1M+ live token transactions via Alchemy RPC, achieving sub-1s latency for persistent state updates.

TECHNICAL SKILLS

Languages: C/C++, Java, JavaScript/TypeScript, Python, R, SQL, HTML/CSS

Frameworks: React Native, Next.js, Expo, Node.js, Spring Boot, FastAPI, LangGraph

Developer Tools: Git, Vercel, Supabase, PostgreSQL, AWS, Docker, IntelliJ

Libraries: Pandas, Numpy, Seaborn, Matplotlib, Scikit-learn, TensorFlow (Keras)

PROJECTS

[Khaya Rewards](#) | *TypeScript, Next.js, Expo, Supabase, PostgreSQL, AWS Lambda, Paystack*

- Architected a full-stack property management platform with automated onboarding and rent-splitting logic, scaling infrastructure to support 3 live landlords and 23 pilot tenants.
- Designed complex PostgreSQL automations processing R124k+ in rent alongside AWS Lambda microservices for physical coupon redemptions on a React Native mobile app.

UAV & UGV Radio Bridge – Raytheon Drone Competition | *C++, CMake, Serial I/O, ROS2*

- Engineered a custom C++ radio bridge driver for a Raytheon competition, consolidating asynchronous UART communication to stream real-time sensor data with <20ms latency.
- Designed a robust data-routing architecture to synchronize multi-agent coordinates, ensuring high-fidelity bi-directional telemetry for cooperative autonomous mission execution and obstacle avoidance.

Recursive Language Model | *Python, LangGraph, Next.js, FastAPI, Docker, E2B, Modal, TypeScript*

- Engineered a stateful LangGraph pipeline for Recursive Language Models, designing a secure, pluggable runtime layer across Docker, Modal, and E2B to safely execute LLM-generated scripts within isolated sandboxes.
- Built a real-time Next.js and FastAPI visualizer dashboard utilizing Server-Sent Events to trace multi-depth execution trees, while exposing parallel batch queries to optimize raw text processing and reduce context-window overhead.
